9. In a large theatre there are 20 rows of seats.

The number of seats in the first row is  $a$ , where  $a$  is a constant.

In the second row the number of seats is  $(a + d)$ , where  $d$  is a constant. In the third row the number of seats is  $(a + 2d)$ , and on each subsequent row there are  $d$  more seats than on the previous row. The number of seats in each row forms an arithmetic sequence.

The **total** number of seats in the first 10 rows is 395

(a) Use this information to show that  $10a + 45d = 395$  (1)

The **total** number of seats in the first 18 rows is 927

(b) Use this information to write down a second simplified equation relating  $a$  and  $d$ . (2)

(c) Solve these equations to find the value of  $a$  and the value of  $d$ . (3)

(d) Find the number of seats in the 20th row of the theatre. (2)
